Anti-Fatigue Footwear Insoles

Patent #7913423 & other patents pending

## Ergo Comfort Shoe Insole

### Performance Cushioning

Full length **Ergosert™ technology** layer is laboratory certified to provide superior cushioning to fight fatigue.

### Durability

Ergosert™ material is lightweight resisting break down, cracking, and compression set.

### Anti-Microbial Protection

Microzap™ additive in anti-friction top and **Ergosert™** layer fights bacteria.

**Price USD: \$ 29.95**

- **Fatigue Fighting Cushioning ★★★★★**  
**Ergosert™ technology** is laboratory certified to have the same ergonomic properties as premium industrial anti-fatigue matting. **Ergosert™** material is lightweight and durable, it does not harden like PVC foam, does not breakdown like latex foam or take a compression set like EVA foam.
- **Ergonomic Tuned Cushioning**  
Ergonomic tuned cushioning is based on foot size and weight.
- **Anti-Blister Top Cover**  
By controlling the amount the foot slides across the insole's surface, the anti-blister top cover helps prevent blisters and keeps feet cooler & drier.
- **Versatile Fit and Use**  
**Ergobuddy®** insoles will fit boots, hiking, casual, and athletic shoes. They are performance insoles to be used all day for standing, walking, or running.
- **Fights Odors**  
The Microzap™ antimicrobial in the top cover helps keep the insole top odor free.

PVC & Latex Free Insoles

Fitting: Remove the existing insole and slide the new Ergo Comfort Insoles into your shoes. If your new insoles need to be trimmed, use a pen and trace the old insole's shape (fore-foot part only) on the bottom side of the new insole. Carefully cut the new Ergo Comfort insoles with scissors and place them in your shoes.

**Ergobuddy®** and **Ergosert™** are trademarks of Johnson Technologies Corporation.
